Crookwell 2: Concrete Plant Powers Up!

Divall's and Concrete 4 Goulburn have secured the subcontracting of concrete supply and plant hire for the Crookwell 2 Wind Farm working with head contractors BMD Constructions. Divall's and Concrete 4 Goulburn are mixing and delivering the concrete which forms the foundations for each of the 28 turbines.

Each of the 28 foundations consists of approximately 460 cubes of concrete and has required substantial planning due to the size of the large foundations. As a result, the batch plant must run continuously during a pour with agitators loading and moving concrete every 8 minutes.

Current scheduling has Divall's subcontracted works complete in the first half of 2018, weather permitting. The Crookwell 2 Wind Farm is an important step for the local area, for renewable energy, and for the environment.

Divall's have had the opportunity to be involved with the Crookwell 2 Wind Farm project due to BMD's commitment to the engagement of local contractors and suppliers.
