

NEWS update JUNE 2017

CLINTON STREET WATER MAIN NEARING COMPLETION

In conjunction with Goulburn Mulwaree Council and UEA, Divall's Earthmoving undertook the construction of a new water main from Faithfull through to Sloane Street, in Goulburn. The project included service investigation, & design and excavation of launch and receive pits for upcoming under bores.

Work began in January 2017, when a team of six men began the construction of the new water main. The young team embraced all conditions including inclement weather and constant traffic flow, completing the project in just under 4 months.

The new water main will provide an updated and more efficient water channel throughout Goulburn.

Divall's would formally like to thank the Goulburn community for their patience and understanding throughout the project.
