

NEW CATERPILLAR 2012 D8T BULLDOZER

Pictured - L-R - Jack Divall, John Divall, Harry Divall and Andy Divall

In December 2012, Divall's Earthmoving & Bulk Haulage took delivery of a brand new D8T Caterpillar Bulldozer. This brings the total number of bulldozers in the fleet to six; of which three are D8's.

The durable construction of the D8T is well suited for tough working conditions. It has excellent productivity, optimal operator comfort, and robust reliability.

The new D8T offers a number of sustainable benefits, such as:

- Fuel saving features like Enhanced Auto Shift which helps decrease overall fuel consumption and results in a decrease in combustion of carbon, thus reducing greenhouse gases. Ecology drains allow fluids to be easily captured for recycling or proper disposal.
- Systems that improve operator productivity, as well as save fuel and wear and tear on the machine.

Divall's Plant Operator, and long term employee, Anthony 'Easy' Wray (pictured below), is very excited about his new machine, and its features.

The D8T cab is designed and equipped for operator productivity, safety and comfort. The standard isolation-mounted cab reduces noise and vibration. Large windows, tapered hood, and notched fuel tank provide excellent visibility to all sides of the machine and around the job site. Operators will enjoy comfort features like standard Cat Comfort Series Seat, adjustable arm rests and automatic climate control.

Anthony is looking forward to putting his skills and experience into action whilst operating this great new machine.
