

UPDATING FLEET OF SKIDSTEERS

Divall's have owned & operated a fleet of five Caterpillar skid steer loader machines since 2007. We are in the process of renewing our current fleet, with four new Bobcat T650 skid steer loaders. So far Divall's have taken delivery of two of the new machines. Our first is pictured below working on Kialla Road, Crookwell, and is proving to be a sound investment.

The Bobcat T650 compact track loaders will be a perfect addition to the Divall's fleet. These machines are part of the M-Series. The M-Series machines get top productivity and the vertical lift path gives you maximum forward reach at flatbed truck height, for a variety of

grading, digging, trenching and backfilling jobs. M-Series models deliver unequalled digging and pushing power, combined with the most available attachments in the industry.

Numerous makes of these machines were trialled in the process including Caterpillar, JCB and Volvo.

Both Management and Operators were heavily involved in the decision process, with the end result being to go with the new Bobcat.

All of our skid steer machines come with their own tip truck. The package is perfect for all size jobs, from moving dirt or cleaning up your backyard, to larger civil works that require the mobility and expertise of a smaller machine.
