

NEWS UPDATE NOVEMBER 2014

REGIONAL RENEWABLE ENERGY BUSINESS FORUM

From the 26th October, 2014 – 9th November, 2014, The Goulburn Group put together the Goulburn Connects Sustainability Festival Program. The aim of this festival was to promote connection between local business and renewable energy developers.

Divall's Earthmoving & Bulk Haulage were able to take part in this festival by setting up a stall and taking part in the Regional Renewable Energy Business Forum and Expo hosted by SERREE (South East Region of Renewable Energy Excellence).

The Expo created an opportunity for local businesses to grow discuss possible joint ventures to help them meet the needs of the growing industry. During the Forum, Divall's Engineering Manager, John de Groot, spoke on how to bid for a project and what to expect on a project site when your tender is successful.

Some of the other topics discussed at the forum included:

- An overview of the region's Renewable Energy Projects
- Meeting OH&S Requirements and other compliance issues
- Current Renewable Energy Business Opportunities

Another area in which Divall's was able to participate was the Electric Vehicle Expo displaying a range of electric and hybrid vehicles.

Divall's was able to showcase our 20 Tonne Hybrid Excavator (pictured below), and demonstrate how it differs from a traditional Excavator.

The Sustainability Festival has provided information for local business to ensure they are aware of, and have access to opportunities within the Renewable Energy Industry.
