

# NEWS update SEPTEMBER 2016

## KENWORTH T359 10X6 SUPER TEN

Truck Number 8 of the Divall's fleet is powered by an ISM 440 Cummins engine, via an 18-speed Eaton manual transmission.

This ten wheeler is usually utilised for jobs with tighter accesses that would have previously required the use of a six wheeler truck. Optimum weight distribution and payload is achieved with its specialist body built by Sloanebuilt Trailers, achieving a 20 tonne payload over the six wheeler 12 tonne payload. The result of this is better productivity and value to our customers.

All trucks in our fleet are fitted with MT data in-vehicle satellite tracking to monitor real time vehicle movement with the ability to transmit location information directly back to our Divall's allocations team, increasing equipment productivity, utilisation and safety.
